Size status: small business under SBA size standards for 541511 and 541512

Contact: info@torusline.com, +1 (908) 767-9292

Core competencies

- Government information systems and MIS: public investment platforms, project banks, appraisal tooling, parameter databases, monitoring and reporting.
- Platform engineering and modernization: legacy to modern architecture without disruption, cloud deployment, reliability, observability, automated delivery.
- Data and AI, where justified: document classification, screening of submissions, appraisal assistance, anomaly detection, AI readiness from pilot to production.
- Technical advisory and delivery assurance: architecture review, build-versus-buy, vendor selection, bid evaluation, owner's engineer role.

Differentiators

- Eight government information systems built for seven governments between 2017 and 2022.
- Senior engineers do the work. The founder has roughly twenty years in software and runs an 80+ engineering organization.
- Every release passes automated regression testing. Systems ship with observability, recovery targets and runbooks.
- Code and documentation are handed over to the client, not withheld.

Past performance

All delivered between 2017 and 2022 with Cambridge Resources International, with Torusline's founder and team as engineering partner.

PIMIS, Ministry of Finance and the Public Service, Jamaica. Web repository of public investment projects across central government, public bodies and public-private partnerships, with electronic submission and tracking.

Integrated Bank of Projects, Ministry of Finance, Planning and Economic Development, Uganda. Single-window platform covering the project lifecycle through four decision gates, hosted by the National Information Technology Authority.

e-SNIP, Ministry of Economy and Finance, Mozambique. Portuguese-language platform for the National Public Investment System, with information across appraisal, approval and implementation.

Company snapshot

Torusline LLC, a US small business in New Jersey, formed in 2024 to carry forward work its founder had delivered as technology partner to CRI since 2017. Distributed team of 10+ across software development, automated QA, DevOps, site reliability and data engineering. Core team plus a vetted associate network. Available as prime, subcontractor or consortium member.
